

# MongoDB 2.1 Aggregation Framework

(follow the "fun" tag)

Follow the flow of three documents in a MongoDB 2.1 Collection as they undergo three stages of an aggregation pipeline to the Result. The path of the three embedded array elements "fun" highlights the \$group expression. It pivots on array elements, while calculating cross-document values. For more information, including the actual aggregation pipeline and dataset, see

<http://blog.mongolab.com/2012/07/aggregation-example/>  
or <http://bit.ly/22agg>
